## **Honoring Student Diversity Report**

In terms of which skills are developed among the students admitted to the college, first of all, by interviewing and testing the students, their inclinations and skills are identified. The teaching skills of the students are seen through the demonstration of teaching skills diagnosis and teaching enrichment. Efforts are made to improve the skills in which the students are not proficient through practice. Feedback from the teacher as well as fellow students is taken into consideration. Through this, an attempt is made to develop undeveloped skills through practice. Communication skills, various arts, self-awareness and attitudes towards ICT are guided in the students through the "Enhancement in Professional Capacities"(EPC). In these demonstrations, students are divided into groups. In these programs, students are grouped into groups for teaching and study in different schools and in the study program, responsibility for the program is planned. Study teaching work and activities are planned for the overall development of the students in the entire internship. The trainees get the experience of running a school in cooperation with each other. Every demonstration is planned through the college as per the university syllabus.
